

“SOFT-DOCK”

Knott has designed, especially for these new coupling heads, a new **“Soft-Dock”** rubber protector. The “Soft-Dock” will protect the rear of the towing vehicle when coupling up or uncoupling the trailer. It will offer additional protection to the front of the head from ingress of water, salt and grit from the road surface. “Soft-Docks” are already available for other coupling head models. Please ask for details.
