## KRV 20 HANDBRAKE PROTECTION SKID

As you may be aware all of the new KRV 20 couplings currently supplied are 2017 MKII versions. They are fitted with a redesigned strengthening plate welded into the centre of the skid. (See picture below.)

This modification therefore does not require the fitting of the additional strengthening brackets.

It is recommended that all trailer components are well maintained and any damaged parts are replaced.

**Always use **KNOTT** original components!**
