

# The Knott Group – global competency

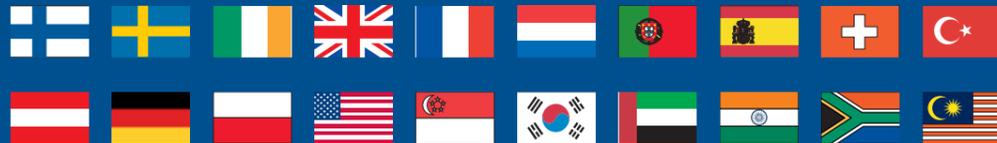

■ The member companies of the Knott Group design, develop, produce and market braking systems for commercial and off-highway vehicles together with running gear components for trailers. Production is sited at numerous locations in various countries and is undertaken strictly in accordance with stringent standards of quality.

Competent, one-to-one consulting and outstanding product quality are characteristic of all the companies within the Group.

All around the globe, we maintain delivery logistics, service and parts supply dependably and on a very high level.

We make your brake

# Survival of the fittest

Rules that apply in nature are also true in the defence sector: The solutions which are best adapted to the environment and the job to be done are those that stand the test of time.

**KNOTT has been building trailer systems for over 50 years, both for civil and military applications. Despite the many differences existing between the various KNOTT systems, they have one vital thing in common: They are ideally suited to the job in hand.**

## Flexibility plus mobility

Because everything hinges on your specific needs, we custom tailor our Knott trailer systems in line with your specifications with respect to

- Payload
- Chassis design and dimensions
- Type and number of axles
- Brake concept (whether overrun brakes or power brakes assisted by other means)
- Type of coupling device
- Drawbar height

We are quickly and economically able to implement even small batch sizes and to a high standard of quality. Non-standard designs are welcome.

As a Knott customer, we will quickly have you kitted out with the perfect trailer system configured precisely to the needs of your specific assignment.

Individually tailored down to the smallest detail: Your own ready-to-install KNOTT trailer system.

## Spare parts over the entire life of your trailer

Knott has continued to provide the assurance of a reliable spare parts supply over decades. We also continue to develop solutions permitting the technical conversion and modernisation of existing vehicle models.

## Unique degree of flexibility: Height-adjustable drawbar from Knott

The benefit of the Knott solution: With unbeatable speed, simplicity and accuracy, this Knott-patented drawbar allows height adjustment using a winding handle.

This affords customers the utmost flexibility in the choice of the towing vehicle, while the trailer remains consistently at the optimum angle to the road surface, guaranteeing optimum driving conditions.

## Perfectly integrated: The market leader in brakes

Knott is the market leader in the field of brake systems for the new generation of armoured vehicles. For example, Knott supplies the complete braking system for the Boxer armoured transport vehicle.

**Strong partners** A few examples from the Knott customer list:

Renowned names from the global defence sector speak for themselves – and for Knott.
