

Important information for customers regarding the phasing out of brake cable 35006

More than 25 years has passed since the non-detachable style cable (Fig.1) was last used in serial production. Knott-Avonride Ltd has now decided to cease manufacturing cables in the UK using the fixed eyelet. This change will take effect during the first quarter of 2019.

It will be replaced by the current detachable cable and used in conjunction with the standard 910120 eyelet (Fig. 2).

This is a straight forward like for like swap and the parts are entirely retro-fittable when fitted to Knott brakes. The eyelet can then be re-used; the cable only will require replacing from time to time.

Fig.1 – Non-Detachable

Fig.2 – Standard with Eyelet
